

Webinar : An Introduction to SolarApp+ for Virginia Localities

Learn about how Virginia local governments can streamline rooftop solar and solar+storage permitting with the free **Solar Automated Permit Processing (SolarAPP+)** tool.

With the continued growth of residential solar in Virginia, local permitting offices are processing an increasing number of permits for residential solar panel systems. SolarAPP+ can streamline this process and help to reduce necessary staff time and resources through an online automated and standardized approval process.

During the webinar you will learn more about the benefits of the SolarAPP+ tool. Speakers include:

- Local officials from Harrisonburg and Culpeper County that are already using SolarAPP+.
- Representatives from the Virginia Dept. of Energy and the UVA Virginia Solar Initiative about statewide solar trends.
- Coordinators of the SolarAPP+ tool from National Renewable Energy Laboratory (NREL) , Underwrite Laboratories (UL), and Solar Energy Industries Association (SEIA).
